

FERTILUQ S 13-39-13

**COMPOSITION**

13% total nitrogen (N) by weight. 3.6% nitric nitrogen (N) by weight. 8.1% ammoniacal nitrogen (N) by weight. 1.3% ureic nitrogen (N) by weight. 39% neutral ammonium citrate-soluble and water-soluble phosphorus pentoxide (P_2O_5) by weight.

13% water-soluble potassium oxide (K_2O) by weight.

Microelements

0.025% water-soluble boron (B) by weight in mineral form. 0.01% water-soluble copper (Cu) by weight, chelated by EDTA. 0.04% water-soluble iron (Fe) by weight, chelated by EDTA. 0.07% water-soluble manganese (Mn) by weight, chelated by EDTA. 0.003% water-soluble molybdenum (Mo) by weight in mineral form. 0.015% water-soluble zinc (Zn) by weight, chelated by EDTA.

Free from chloride.

USES

FERTILUQ S 13-39-13 is a solid water-soluble foliar fertilizer formulated on a nitrogen, phosphorus and potassium base, balanced at a ratio of 1-3-1, with chelated micronutrients, which are characterised by their high degree of purity and rapid assimilation.

FERTILUQ S 13-39-13 quickly corrects the imbalances that may arise in the fertilisation or fertigation of the crop. Due to its high phosphorus content, it is especially suitable for stimulating the flowering and setting of the fruit.

As foliar fertilizer, it complements a rational fertilisation of the soil. It can be used with all types of crops, especially during pre-flowering.

DOSES AND HOW TO USE

FERTILUQ S 13-39-13 is applied in a spray at a single dose of 300 g/hl; however, this dose may be increased to 500 g/hl when there is a marked phosphorus deficiency or a fast result is required.

USAGE PRECAUTIONS

Avoid carrying out the treatment at times of most sunlight, as rapid evaporation of the water would hinder its foliar absorption.

It can be used in conjunction with most plant protection products.

Do not mix with oils or products with an alkaline reaction.

For more information, please consult our Agronomy Technical Department.
