

SOMBREADOR LUQSA

COMPOSITION

Made from 100% micronised mineral kaolin.

USES

SOMBREADOR LUQSA forms a film of fine mineral particles that reduces the risk of sunburn on crops.

DOSAGE AND METHOD OF USE

Apply as a standard foliar spray at a rate of 4–5 kg per 100 litres of water. Mix the mixture thoroughly. We recommend adding our LUQMULLANT wetting agent to aid distribution and enhance effectiveness.

Do not apply directly to wet surfaces, as this reduces its effectiveness.

PRECAUTIONS

Keep out of reach of children. The use of dust masks and safety goggles is recommended: it may cause mild irritation to the eyes and/or respiratory system. Wash your hands thoroughly with soap and water after using the product. Take off any contaminated clothing and wash it before wearing it again.

Recommended for use in organic farming.
